CorreSense announced **SharePath**, a software product that provides a quantum leap in IT reliability by tracing business transactions through all the data center layers and applications and back to the end-user. With SharePath, every single transaction and activation is recorded and correlated to provide both a birds-eye and detailed view of the connections across the four dimensions – end-users, applications, infrastructure and business processes.

DS3 DataVaulting announced its **Data Lifecycle Management solution**, giving organizations the ability to backup and restore data based on predetermined storage and recovery tiers. With DS3 Data Vaulting's DLM solution, data is categorized into three tiers: critical (integral to ongoing operations), important (valuable but not mission critical) or archival (required but not typically retrieved). All data is initially backed up online, moved to near-line disk-based storage after a period of time based on retention policies and finally transitioned to the offline archive storage tier.

Infor announced Infor **CRM i Edition**, a new solution that provides enhanced customer relationship management capabilities to customers with Infor enterprise resource planning solutions on IBM System i platforms. The new solution can help System i customers create growth and loyalty through heightened customer dialogue, increased revenue, reduced costs and enhanced customer service.

Lyzasoft introduced the **Lyza Commons**, an enterprise collaboration server that enables business analysts to share data and reports with trusted peers through a user-driven publishing model. The transparent development environment facilitates this sharing, while allowing IT to assimilate innovation for rapid prototyping, functional requirements design and production reporting and business intelligence.

Metastorm announced the release of **Metastorm Integration Manager for Linux System Z**. Metastorm Integration Manager is a software application for complex system-to-system integration, process management and managed file transfer. The software runs on over twenty different operating systems, including mainframes, and integrates with Metastorm's human-centric business process management Suite.

ModelRight, Inc., a data modeling software company, released **version 3.5 of its flagship product ModelRight**, continuing the evolution of its data modeling software tool. With this new release ModelRight has added support for three additional databases as well as enhancements increasing the productivity of the tool.

SunGard added a new watchlist-checking online compliance solution for corporations to its **Ambit Anti-Money Laundering** solution suite. Available through SunGard's Infinity Software-as-a-Service platform, **Ambit Customer Due Diligence** provides a range of Web-based tools that help ensure security and compliance by resolving and verifying the identity of potential/current employees, customers, suppliers and business partners. It helps customers comply with government anti-terrorist legislation and list checking regulations.

Texas Memory Systems announced the **RamSan-6200**, a solid state disk (SSD) system. The RamSan-6200 offers up to 100 terabytes of Flash-based storage in a single 40U rack configuration that can sustain a record 5 million input/outputs per second with 60 gigabytes per second throughput while using a little over 6 kilowatts of power.
